

ALOYSIUS ANGUS CHEN

Cybersecurity Specialisation | Year 2 Diploma in Information Technology | Singapore Polytechnic

aloysiuschen21@gmail.com | www.linkedin.com/in/aloysius-angus-chen | Singapore

Professional Summary

Cybersecurity-focused Year 2 Information Technology student at Singapore Polytechnic, specialising in Cybersecurity. Hands-on project experience in secure coding, web application security, vulnerability assessment, database systems, front-end development and full-stack web development. Familiar with JavaScript, HTML, CSS, Node.js, SQL, Kali Linux, Wireshark, Burp Suite and security testing workflows. Strong interest in understanding how vulnerabilities happen, how security controls should be implemented, and how fixes can be verified through practical testing. Career interests include cybersecurity analysis, SOC operations, application security and vulnerability assessment.

Education

Singapore Polytechnic | *Diploma in Information Technology (Cybersecurity Specialisation)* | Apr 2025 - Apr 2028

- Developing practical skills in secure coding, web application security, ethical hacking, network security, database systems and full-stack web development.
- Coursework and projects involve vulnerability analysis, security remediation, relational database design, application integration, debugging and technical presentation.
- CCA involvement includes Welfare Services Club and Astronomy Club, providing opportunities to build teamwork, communication and responsibility.

Bedok South Secondary School | *GCE O-Level* | Jan 2021 - Nov 2024

- Former NPCC member; developed discipline, leadership, teamwork, communication, responsibility and the ability to work within a structured team environment.

Selected Technical Projects

SnapSell Web Application Security Assessment | *ST2515 Secure Coding* | Team Project | 2026

- Performed source-code review and controlled security testing on a Node.js/Express marketplace application with a MySQL database.
- Assessed issues across SQL Injection, Cross-Site Scripting (XSS), Broken Access Control, Cryptographic Failures and Security Misconfiguration.
- Demonstrated vulnerable behaviour, identified root causes and applied secure coding controls including parameterised SQL queries, output handling, authentication and ownership checks, password hashing, externalised secrets and restricted CORS configuration.
- Used Postman, browser Developer Tools and MySQL Workbench to gather evidence, test API behaviour and compare before/after results.
- Retested the same attack paths after remediation to confirm that malicious behaviour was blocked while legitimate functionality continued to work.
- Presented the exploit, root cause, fix and verification process for SQL Injection and Broken Access Control.

Restaurant Ordering System - Dining Feedback & Response | *ST0525 Database Systems* | Individual Project | 2026

- Designed and extended a relational database with dining feedback and feedback response entities using an ERD, keys, constraints and normalised table relationships.
- Built PostgreSQL functions for feedback CRUD and response handling, including input validation, ownership rules, error handling and clear success/failure messages.
- Implemented a completed-order business rule so customers could only review products that appeared in their completed orders.
- Integrated database functions into a Node.js/Express application and worked with frontend forms, SQL joins, filtering, sorting and an admin sale-order summary dashboard.
- Tested both successful and error cases through the running application and database tools to verify the end-to-end flow.

Additional Projects

FED CA1 - Front-End Development | *LinkedIn Project*

- Built a front-end web project using HTML, CSS and JavaScript, applying page structure, styling, user-interface design and browser-based interaction.
- Strengthened practical skills in client-side scripting, debugging, layout consistency and creating a user-focused web experience.

FED CA2 - Front-End Development | *LinkedIn Project*

- Extended front-end development experience through a second web project using JavaScript, HTML and CSS.
- Applied interface design, client-side logic, debugging and iterative improvement to develop a more complete browser-based application.

BED CA2 - Back-End Development | *LinkedIn Project*

- Completed backend-oriented project work involving Node.js and database concepts as part of full-stack web development.
- Strengthened understanding of how server-side application logic connects with database operations and supports front-end functionality.

FOP2 CA2 | *LinkedIn Project*

- Completed as part of programming coursework and listed in the Projects section of my LinkedIn profile.
- Contributed to the development of structured problem-solving, logical thinking and programming practice.

Ethical Hacking Concepts & Tools Research | *ST2422 Ethical Hacking Essentials* | *Team Project* | 2026

- Participated in a team research project on ethical hacking concepts and tools as part of cybersecurity coursework.
- The project covered ethical hacking, network protocols, operating-system vulnerabilities and network enumeration.
- Developed experience organising technical research into clear presentation content and working with teammates across different cybersecurity topics.

Cybersecurity Knowledge & Practical Exposure

Security Testing and Secure Development

- Understand that browser inputs, URL parameters and direct API requests must be treated as untrusted and validated on the server.
- Familiar with the idea that authentication establishes identity while authorization decides whether that identity is allowed to perform a sensitive action.
- Understand why parameter binding is used to keep untrusted values separate from SQL commands and why ownership checks belong on server-side routes.
- Can follow a practical security workflow: identify the weakness, reproduce it, understand the root cause, apply the correct control and retest the same behaviour.
- Comfortable reviewing requests and responses, testing API endpoints, checking database behaviour and documenting evidence of remediation.

Technical Skills

Cybersecurity: Cybersecurity, Secure Coding, Web Application Security, SQL Injection, Cross-Site Scripting, Broken Access Control, Input Validation, Network Security, Ethical Hacking, Vulnerability Assessment and Penetration Testing (VAPT), Database Security

Security Tools: Kali Linux, Burp Suite, Wireshark, Postman, Browser Developer Tools

Programming / Web: JavaScript, HTML, CSS, Node.js / Express fundamentals

Databases: SQL, relational database design, joins, PostgreSQL functions, MySQL Workbench

Development Tools: GitHub, Linux, Figma, Microsoft Power BI

Interpersonal: Attention to Detail, Leadership, Teamwork, Communication, Critical Thinking, Problem Solving, Logical Thinking

Certifications

LinkedIn Learning

- Burp Suite Essential Training - completed and published on LinkedIn.
- Learning LinkedIn for Students - completed and published on LinkedIn.

Activities & Personal Development

Singapore Polytechnic and Secondary School

- Volunteer - Tree Planter, Singapore Polytechnic (Apr 2025).
- Member of Welfare Services Club and Astronomy Club.
- Former NPCC member at Bedok South Secondary School; experience developed discipline, responsibility, teamwork and leadership.

Languages

English: Native or Bilingual

Chinese: Native or Bilingual

Career Objective

To gain real-world cybersecurity experience and contribute to secure, reliable and user-focused digital systems while continuing to strengthen technical analysis, communication, vulnerability assessment and incident-response skills.
